

MIRAZUR

market-collection.com

Tile is an inherently sustainable choice because it can last a lifetime, produces no VOC off-gassing and is a non-leaching product that does not adversely affect other materials or humans that come in contact with it. All of our product lines, produced both in the US and by our global partners are made in factories that share our passion and sense of responsibility to care for the environment and produce products in the most sustainable way possible.

Mirazur Specifics:

- 62% Pre-Consumer recycled materials
- Lead-Free
- Non-Toxic
- No VOC off-gassing

Additional documentation available upon request

Around the Mirazur Factory:

- All of the water used to produce Mirazur is contained in a closed system so that most of it can be reused in the production of new tile. The small percentage of water that cannot be reused is taken to a treatment facility to be properly treated and cleaned, so as not to damage the environment.
- Scrap tile is ground up and reused in the body of new tile.
- All of the excess heat generated from the drying process of the clay body is recaptured to generate electricity used in the manufacturing process and returned to the electrical grid.
- Mirazur is packaged in boxes that contain 67% recycled cardboard. Both the ink and glue used are water based.
